

BANG GOLF BANG-O-MATIC CENTERCUT CNC MILLED FORGED WEDGE HEADS

- Playing as soft as butter, we have the CNC Precision Milled forged Bang-O-Matic wedge heads! These are forged wedge heads but are made for game improvement - they have a nice wide sole and low center of gravity.
- The Bang-O-Matic Center Cut Iron features a revolutionary innovation in the design that differs from cavity, blade or muscle back. It has no top line and discretionary weight is relocated to the sole. Weighting is low to help you get the ball easily into the air, as well as moving toward the toe to keep the center of gravity away from the hosel and below the center of the ball
- The Center Cut iron is forged for soft carbon steel for a responsive feel preferred by low handicap golfers. The softer steel allows for more bending than conventional 431 stainless steel iron heads for improved custom fitting.
- Face and back side are both CNC milled for utmost accuracy and precision. The milled engravings on the face improve back spin control
- The Bang-O-Matic Center Cut iron is an ultra game improvement tool.
